ABOUT US

Vision: Cavist Manufacturing will be the known leader in molded-on protection of electronic components. We use our know-how to create high quality solutions for our customer. We will cultivate an enthusiastic, honest work environment.

Background: The founders of The Cavist Corporation realized early on that there was a strong need for an alternative to potting of electronics. As a result, The Cavist Corporation was incorporated in 1998 to bring Low Pressure Injection Molding to the US. Initially, equipment was imported from Europe but it was soon realized that better and more efficient equipment was needed for the American market. Cavist then set out to develop the most efficient equipment in the market. The Mold-man™ range of machines was developed. As a testimony to the quality and efficiency of its Mold-man™ machines, Cavist Corporation now holds patents in USA as well as in Europe.

In-depth studies, truly learning how to process Polyamide and developing its own range of machines from the ground up, gave the engineers at Cavist an in-depth understanding of how to successfully create the best Low Pressure Molding solutions for a given application.

The vast knowledge that was acquired about the complete Low Pressure Molding process prompted customer requests for Cavist to mold on contract basis. Several projects were successfully started and Cavist Manufacturing is now a full service contract manufacturer for Low Pressure Molding.

Cavist Manufacturing is a one-stop-shop for the following services:

Application evaluation. Initial evaluation, to determine if our Low Pressure Molding process is a viable solution for your product.

Application Engineering. We give input to create the best and strongest solution for over-molding circuit boards, sensors and connectors.

First Articles for your approval.

Low Pressure Molding services.

Production mold-sets for manufacturing.

Testing and special packaging, when required as required.

Contract manufacturing by ISO 9001:2008 quality shop with more than 10 years experience.

Turnkey supply of products. We can include procurement services of components.
